Submission Instructions for PA1

The following are submission instructions for PA1 as well as all future programming assignments.

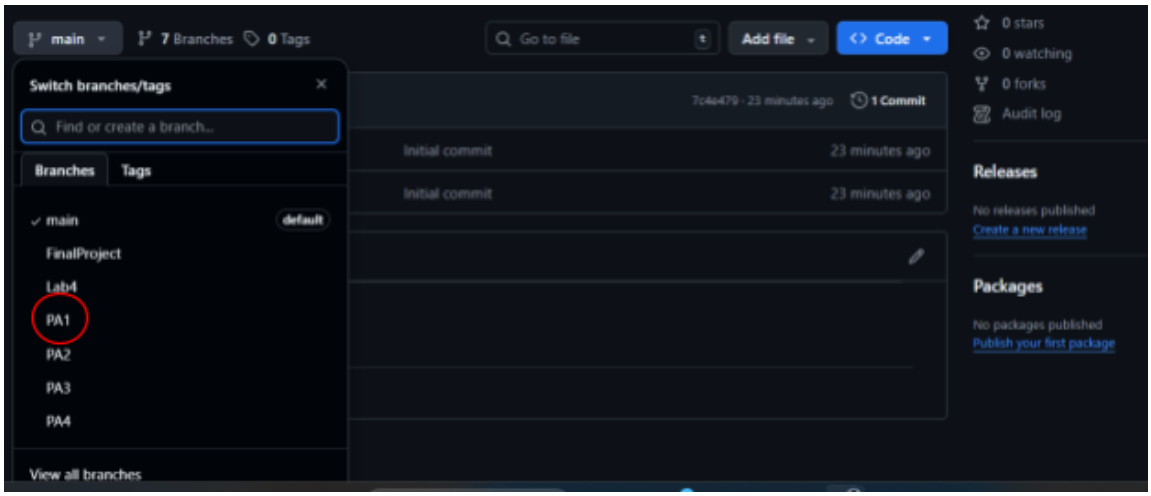
1. At this point, you should have received an invitation to your own personal github repository as part of your organization. The URL for your github repo should be something along the lines of:

   github.com/BU-EC327-Spring2026/[YOURNAME]

   And should look something like this (if you do not have the "Compare & pull request" buttons, don't worry, they aren't important

   IF YOU HAVE NOT RECEIVED AN INVITATION PLEASE LET YOUR TA KNOW ASAP

2. For PA1, navigate to the PA1 branch (main → PA1)



This is the branch you will be pushing your PA1 code to. If you know how to push code to a github branch, you can ignore steps 3 - 5.

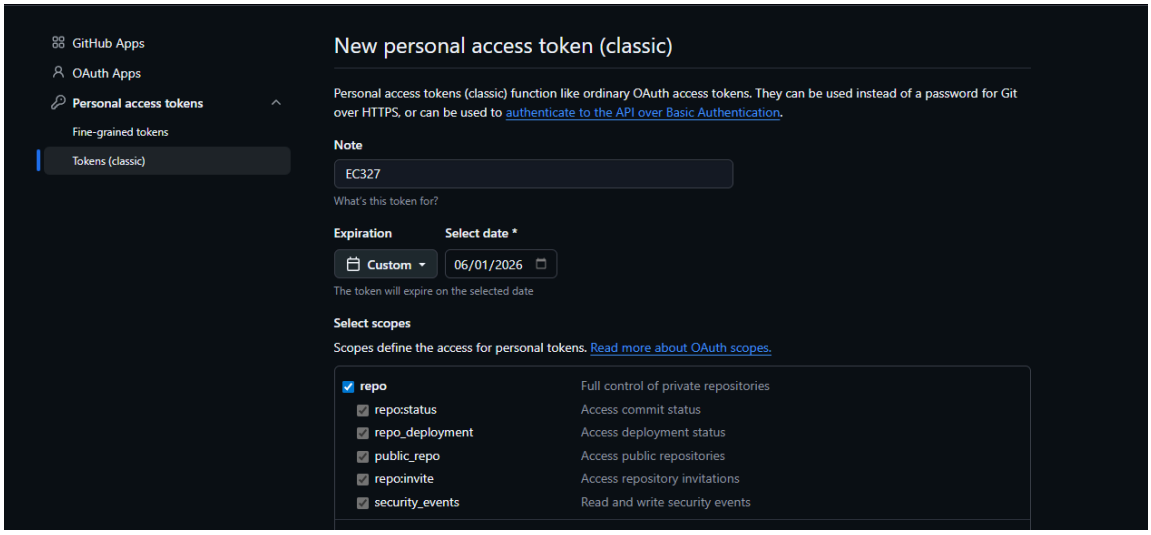
3. Create a new github token. Many of you have already created a github token, if you have already done that, ignore this step.

   On github, click on your profile picture in the TOP LEFT corner.

   Go to Settings → Developer Settings → Personal access tokens → Tokens (classic).

   Click: Generate new token → Generate new token (classic) .

   Name the note “EC327” and set the expiration to some time after the end of the semester (I set mine to June 1st, 2026) click on the repo checkbox (which should then check all the sub-boxes under it).



Scroll to the bottom and click “Generate token”

You should see a string that begins with ghp_,,,,, COPY THAT STRING AND SAVE IT SOMEWHERE ELSE. Once you click away, you won’t be able to see it again

4. Create a new directory where you will store all your PA1 files. Your directory should look something like this:

```
PA1
  |__Q1.cpp
  |__Q2.cpp
  |__Q3.cpp
  |__Q4.cpp
  |__Q5.cpp
```

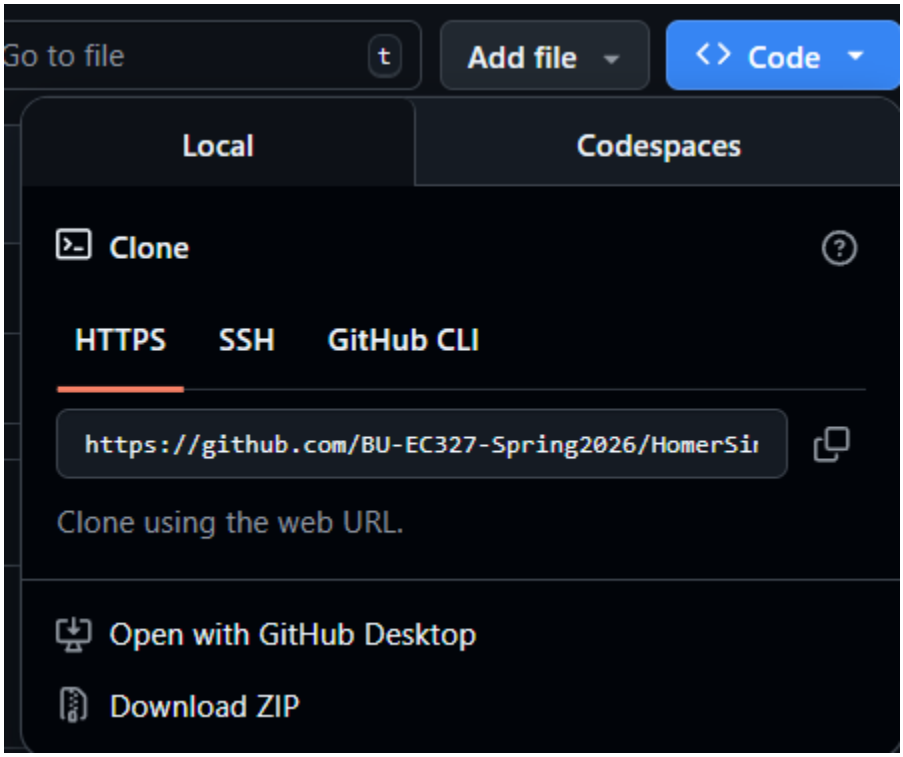
Your files MUST BE NAMED “Q1.cpp”, “Q2.cpp” … etc.

If your files are already in a different directory or are named differently, please move and rename them to match this structure (the best way to do this is in the finder/file explorer)

5. Navigate to the PA1 directory in the terminal using the cd command. Then type “**git init**” (this will 100% work on the lab computers, if you want to submit from your personal computer, you will need to install git: https://git-scm.com/install/).

You should see “Initialized empty Git repository in [DIRECTORY]”

Then, go to your github repo, go Code → HTTPS → Copy the https link



Back in the terminal, set your github repo as your remote origin by typing: **git remote add origin [HTTPS_LINK]**

You should have now connected your local repository to your github repository. If you want to double check, type **git remote -v**, you should see your https links:

origin https://github.com/BU-EC327-Spring2026/HomerSimpson.git (fetch)
origin https://github.com/BU-EC327-Spring2026/HomerSimpson.git (push)

6. Create and switch to a new local branch called PA1 by typing **git switch -c PA1**, you should see “Switched to a new branch 'PA1'”

7. Pull from the remote branch so that you are on the same history with the command **git pull origin PA1**

   Then, do **git add Q1.cpp Q2.cpp Q3.cpp Q4.cpp Q5.cpp** (you can also do **git add .** if you want to add all the files in the subdirectory)

Then commit your changes with **git commit -m “PA1 Submission”**

Finally, push your changes with **git push origin PA1**

If you are asked for a Username and password, use your username but DO NOT USE YOUR PASSWORD, instead use the TOKEN (that weird string of characters we generated earlier) and copy and paste that into where it asks for a password

Great! Your PA1 is submitted! Our autograder will now give you feedback. If you go to Actions → PA1 Submission → grade/grade, it should give you some feedback based on test cases we have created.

Triggered via push 3 minutes ago

ZowProgramming pushed 2e321dc PA1

Status: Failure

Total duration: 50s

PA1 Autograder Summary

Total: 37 | Passed: 27 | Failed: 10

Question	Case	Result	Reason
Q1	1	✅ Pass	
Q1	2	✅ Pass	
Q1	3	✅ Pass	
Q1	4	✅ Pass	
Q1	5	❌ Fail	No numeric output found
Q2	1	❌ Fail	tip mismatch (expected $5.680000, got $8.510000)
Q2	2	❌ Fail	tip mismatch (expected $6.490000, got $9.730000)
Q2	3	❌ Fail	tip mismatch (expected $8.510000, got $11.350000)
Q2	4	❌ Fail	tip mismatch (expected $9.730000, got $12.970000)
Q2	5	❌ Fail	tip mismatch (expected $4.680000, got $5.850000)
Q2	6	❌ Fail	tip mismatch (expected $5.070000, got $6.330000)
Q2	7	❌ Fail	Timed out (likely waiting for input / infinite loop)
Q2	8	❌ Fail	Timed out (likely waiting for input / infinite loop)
Q2	9	❌ Fail	tip mismatch after recovery
Q3	1	✅ Pass	
Q3	2	✅ Pass	
Q3	3	✅ Pass	
Q3	4	✅ Pass	
Q3	5	✅ Pass	

If you have any trouble with getting to this page, please let an EC327 staff member know ASAP (email your TA, go to Office Hours etc.)
